

B 60 W Bp

Kärcher's B 60
App for iPad®!

Innovative. Efficient. Fully configurable.
Intelligent scrubber with KIK (Kärcher Intelligent Key) system.

B 60 W: the ultimate in cleaning diversity.

The Kärcher B 60 walk-behind scrubber is ideal for cleaning areas from 10,764 to 26,910 ft². Interchangeable cleaning heads are available in working widths from 22" in to 26" with adjustable contact pressure. The Kärcher B 60 W can be configured entirely according to your particular cleaning needs.

Shown with D 65 head

1 Large tank for extended operating time and range

The 16-gallon tank-in-tank is designed with smooth surfaces, allowing easy cleaning and complete drainage of dirty water from the tank.

2 Brush head raising

The brush head can be easily raised by pressing down on the conveniently placed pedal. The pedal is textured to ensure secure operation even with wet shoes. The extended edge provides additional security.

3 Smart cleaning heads: rollers, discs or orbital

Five interchangeable cleaning heads are available for the B 60. Rollers brush, disc brush and orbital pad head options allow you to meet any cleaning requirement. All cleaning heads can be changed quickly without tools and are available in working widths from 22" in to 26".

4 Battery operation with on-board charger

The B 60 is battery-operated and is available with various battery types.

5 Squeegee raising

The squeegee can be lifted manually using a lever to lock into place - allowing for more control.

6 Applying the right pressure

The contact pressure of the brush head can easily be adjusted manually to suit individual requirements. This optimizes the cleaning process and energy consumption.

Simple to operate and safe.

Why settle for “easy-to-use” when operation can also be made safer and more convenient?

With the Kärcher Intelligent Key (KIK) system and the EASY Operation advanced operating concept, the B 60 offers an unprecedented level of safety and protection for the operator, the machine and the work area.

1 Safety is a key function

The KIK (Kärcher Intelligent Key) system offers much greater protection against operator errors. Supervisors can preset the B 60 operation settings for specific cleaning jobs and areas, the operator only needs to insert the key. The machine can only be started with the associated coded key, so it is protected against unauthorized use.

2 Slim and fit

With its slimline design, the B 60 easily negotiates awkward objects and narrow passageways. The asymmetric tank shape ensures a clear view of the brush head.

3 Correctly charged

The charging curve of the standard built-in charger protecting the batteries and ensuring long run times and long battery life.

4 Quiet, strong and efficient

In **ecoefficiency** mode, the brush speed and suction force is reduced to a level adequate for relatively light soiling. In this mode the noise level is also reduced up to 4 dB(A), making the B 60 the right choice for cleaning in noise-sensitive areas.

Savings of up to 20% on energy and 10% on water can be achieved in **ecoefficiency** mode.

Impressive technology.

The Kärcher B 60 walk-behind scrubber has a host of technical refinements and innovations whose main purpose is to make the work simple and convenient, with the best possible results and the greatest possible efficiency.

1 Easy fresh water filling

The large fresh water filling inlet is located on the front of the machine, the extra large integrated funnel makes it easy to fill the machine from a bucket. The fresh water inlet cap is held by a retainer so it won't get lost.

2 Easy twist and click

The squeegee setting has a major effect on drying results. To simplify the task of finding the best squeegee position, Kärcher has developed a simple adjuster that allows the squeegee angle to be set in one easy motion.

3 Easy scrubbing and sweeping in a single operation

Both roller heads (R 55 to R 65) include a sweeping function, which eliminates the need for time-consuming pre-sweeping.

4 Easy adjustment

The support wheels can be adjusted with a hand-screw and can also be placed ahead of the squeegee blade. This prevents wheel streaking on sensitive floors. Oil-resistant squeegee blades made of transparent polyurethane are standard on squeegees with support wheels. The rear squeegee blade can also be flipped to increase longevity.

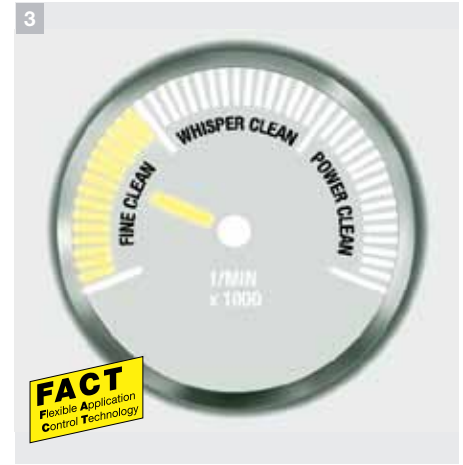

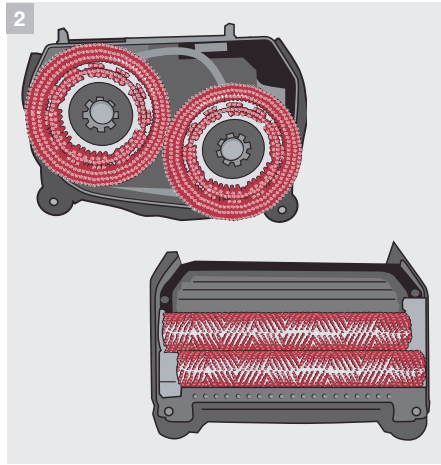

5 Easy Operation

The easy operating squeegee lever is positioned in the middle for convenient use by both right-handers and left-handers and locks in the up position.

6 Easy machine cleaning (optional)

The Kärcher B 60 is the first and only walk-behind scrubbers with integrated tank rinsing. After the cleaning job is finished, the dirty water tank can be cleaned using an integrated nozzle system. Simply connect a water hose to the quick coupling and open the drain hose of the dirty water tank.

One machine. Five heads. Countless cleaning applications.

1 No tools required to change heads

All brush heads are interchangeable and can be exchanged quickly if necessary without tools. The brush heads are securely connected to the machine at three or four points, depending on the model. A plug provides the electrical connection, and a quick coupling connects the water line to the brush head.

2 Cleaning heads

Roller, disc and orbital heads offer specific advantages for different types of use, due to their construction and operating principles. Kärcher brush heads optimally transfer the power of the scrubber to the floor and achieve high cleaning performance and efficiency in all types of use.

Various working widths (from 22" to 26") are available depending on the application requirements. Roller or disc system. Roller always has a sweeping function.

Roller Brushes

Roller brushes provide great cleaning performance on uneven floors, such as safety tiles or joints. Rollers are better at reaching into depressions. In addition, the contact pressure with roller brushes is around seven to ten times higher than with disc brushes, resulting in better scrubbing performance.

Disc brushes

Brush heads with disc technology are equipped with two counter-rotating disc brushes. A foot pedal makes it easy to change brushed. Disc brushes work great for smooth and flat floor surfaces.

S 65 Orbital Scrub Head

This innovative vibrating scrub head is specifically designed for stripping coatings, turning the machine into a basic cleaning solution that can also be used to strip coatings over large areas or in specific locations.

3 Flexible Application Control Technology (FACT)

With FACT technology, a Kärcher exclusive, the brush speed of roller brushes can be adjusted to different cleaning applications using three settings. **Power Clean 100%** - for stubborn dirt and polishing. **Whisper Clean 60%** - reduces noise levels and ensures long working intervals with low power consumption. **Fine Clean 40%**, the grey film on so-called fine stoneware tiles can optimally be removed in conjunction with the green roller.

For full performance. Originals from Kärcher.

Kärcher offers a full-range of accessories to optimize the power and technology of the B 60 scrubber. Various roller and disc brushes are available, making the B 60 an efficient, versatile cleaning machine for all your cleaning applications.

1 Roller brushes: versatile

Roller brushes are available in various hardness grades, from very soft (white) to very hard (black), as well as a special high-low brush (orange) for highly textured floors or joints.

2 Disc brushes: application-oriented

Disc brushes are available in three hardness grades: soft (white), medium (red) and hard (black). A polishing disc (natural color) is also available.

3 Microfiber rollers: just the trick for deep cleaning

Kärcher combines the outstanding properties of microfiber with the benefits of roller technology in the microfiber roller. Uneven floors can be cleaned, making the joints bright again. Microfiber rollers – unlike microfiber pads – are self-cleaning due to their high rotation speed (up to 1,300 rpm). This extends their useful life and eliminates the need for work breaks to clean the rollers. The high cleaning power also allows lower cleaning agent dosage.

4 Disc pads: for all types of applications

Various types of pads are available for a wide variety of applications: white, beige, natural, red, green and black, as well as microfiber.

Efficient diamond pads are available for simultaneous cleaning and high-gloss polishing. A pad drive disc with center-lock pad fixing is available for use with pads.

5 Squeegees: adaptable

Squeegees are available in straight and curved versions to suit your preference. Squeegees can be equipped with squeegee blades adapted to the floor composition. The rear squeegee blade can always be used fourfold.

6 KIK system: extendable

For different facilities or facility areas or for multiple users, additional grey facility manager keys and yellow user keys are available. The red key is reserved for service staff.

7 Cleaning agents: effective

Kärcher cleaning agents are available for the daily tasks of basic cleaning and spot cleaning, specifically designed for use with Kärcher cleaning machines. Effective, economical and environmentally friendly.

8 Roller pads: strong performers

Kärcher innovative roller pads are effective at carrying out all common cleaning tasks. Roller pads combine the advantages of pads and rollers. They are available in soft (yellow), medium (red) and hard (green) versions.
